For a relaxing and carefree
holiday on wheels!

myclean®water sterile

myclean®water active

Drinking water treatment at the campsite.

Anyone travelling in a motorhome or caravan fills their fresh water tank from a wide variety of water sources. Water quality can vary considerably: chlorine, sediment and germs are particularly common in southern countries or where the pipework is outdated. Furthermore, water stored in the tank provides ideal conditions for the proliferation of micro-organisms. Nevertheless, no one needs to go without hygienically clean water whilst on the road – whether for drinking, cooking or showering.

Our filter system ensures reliable drinking water purification. Depending on requirements, the filters are either integrated directly into the pipework or fitted as a fill filter upstream of the fresh water tank. Activated carbon filters reduce unwanted substances and improve taste and odour. Hollow-fibre membrane filters, derived from medical technology, reliably block bacteria, legionella and protozoa – entirely without the use of chemicals.

Both filter technologies can be used separately or, for maximum safety, combined. In this way, **myclean®water** filters ensure a hygienic and safe water supply and allow you to enjoy your water without a care on every journey.

myclean®water active.

For the ultimate taste experience whilst travelling.

Activated carbon filters can be used to remove colouring agents and contaminants, as well as other substances that affect taste and odour, and bacteria from the water.

Our **myclean®water active** activated carbon filter removes chlorine, microplastics, heavy metals, pesticide and medicine residues, as well as other harmful substances that affect the taste, smell and quality of drinking water.

Our
tip

Combine the
myclean®water active
activated carbon filter with the
myclean®water sterile hollow-fibre
membrane filter and enjoy the
very best in safety and taste. The
recommended installation order:
first the **myclean®water active**,
followed by the
myclean®water sterile.

myclean®water sterile.

For hygienic water quality on the go.

Thanks to sterile filtration technology derived from the medical sector, the **myclean®water sterile** ensures the highest level of purity in mobile drinking water supply systems. Its microfine hollow-fibre membrane reliably blocks bacteria such as Legionella, E. coli and Pseudomonas, as well as protozoa and fungi – entirely without the use of chemicals. With a bacterial removal rate of 99.99999 per cent, the filter offers a high level of safety and clean drinking water. This means you're always safe on the go, even when water quality varies.

Did you know?

The reduction in the number of germs is indicated in various log levels. As the log level increases, the number of pathogens decreases significantly. As we at REICH Water Solutions make no compromises when it comes to safety and hygiene, myclean®water sterile reduces the bacterial load by as much as 7 log levels – making it a highly effective filter that has been tested in accordance with the international standard for sterile filtration (ASTM F838-20).

Log-level	Reduction of bacteria (in %)	Start: 10.000.000 bacteria (example)
1	90	1.000.000
2	99	100.000
3	99,9	10.000
4	99,99	1.000
5	99,999	100
6	99,9999	10
7	99,99999	1

The microfine membrane in our **myclean®water sterile** water filter removes micro-organisms of the following sizes:

Protozoa

Length of 1-300 µm

E. coli and Legionella

Length of approx. 2.5 µm

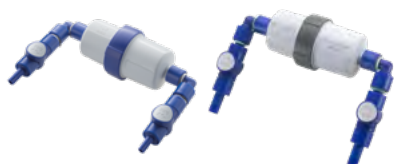

Pseudomonas

Length of approx. 1,5-5 µm

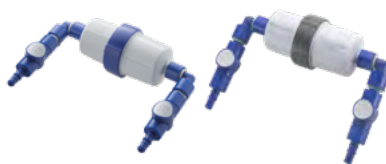

Available sets and accessories.

For myclean®water of REICH Water Solutions.

Whether it's a filter for filling the water tank or a built-in filter, **myclean®water** offers the right solution for every installation scenario. The filters are either connected to the fill hose or permanently integrated into the pipework. The built-in filters are available for both UniQuick systems and standard hose connections.

Built-in UniQuick
(both sides angled connection)
533-250011 sterile
533-251011 active

Built-in hose
(both sides angled connection)
533-250021 sterile
533-251021 active

Built-in UniQuick
(both side straight connection)
533-250010 sterile
533-251010 active

Built-in hose
(both side straight connection)
533-250020 sterile
533-251020 active

Built-in UniQuick
(1 x straight, 1 x angled)
533-250012 sterile
533-251012 active

Built-in hose
(1 x straight, 1 x angled)
533-250022 sterile
533-251022 active

Filter cartridge
533-2550 sterile

Filter cartridge
533-2551 active

Your advantages with myclean[®]water.

Flexible use

The filters are available as an onboard tank fill filter with a Gardena-compatible connection and as a kit for hose or UniQuick systems.

Easy to replace

We advice to replace the filter cardige once per season, or no longer than 12 months. The housing remains in constant use.

KTW-BWGL certified

myclean[®]water is KTW-BWGL certified and complies with the strict requirements of German and European drinking water legislation.

Easy to use

Depending on the set, connect the filter to the fill hose or integrate it into the pipework. And then it's simply a case of: let the water flow! myclean[®]water does the rest.
